Spark Installation

1. Download and extract spark
2. Modify and apply .bashrc file to introduce SPARK_HOME and update PATH
3. That's it. You can start using spark now. In this case spark will instantiate new derbi as we haven't mentioned any connectivity with hive.
4. To refer the same metastore as hive, copy hive-site.xml file to spark/conf location
5. Modify spark-env.sh file to update classpath to point to mysql connector jar file as in export SPARK_CLASSPATH="/usr/share/java/mysql-connector-java.jar"
